

Lab - Testing Patterns

Objective:

1. By the end of this lab, you will examine and understand how the following concepts are used in real-life to test an application:
 - **Custom assertion methods** for clearer failure messages
 - **Delta assertions** for imprecise comparisons (e.g. floating-point values)
 - **Object Mother** to simplify test data setup
 - **Factory pattern** to generate test objects with variation

Please load the starter projects for this chapter and view the code.

Feel free to make any changes you like and even create new examples of your own.
